

How to install nextnanopy

Updated: 11-11-2020

Contact: Junliang Wang (Junliang.wang.w@gmail.com) or python@nextnano.com

Requirements

- Python 3 (recommended installation with [anaconda](#))

Manually install nextnanopy

1. Open the anaconda prompt (it is like a command windows)
2. Go to the directory of the nextnanopy project folder
3. Type: `python setup.py install`
4. Now you should be able to import nextnanopy package

Automatic install nextnanopy (not implemented yet)

1. Open the anaconda prompt (it is like a command windows)
2. Type: `pip install nextnanopy`

If you have an error related with...

- Access denied during installation, try to open anaconda prompt with administrator rights
- numpy, type: `conda install numpy`
- Shapely, type: `conda install Shapely`
- gdspy, type: `pip install gdspy`
- matplotlib, type: `conda install matplotlib`
